

ND NEWS

September 2006

First half of 2006 has been a busy time for ND where a lot of effort has been concentrated around new markets, but keeping our key customers happy and developing new technology and modules for the enhancement of existing products and future products in the pipeline.

In the pipeline: ND has initiated an internal engineering/manufacturing project for wireless data transfer (RF). We see a trend in RF applications world wide, and we aim for a cost competitive, slim design for the transmitter and the receiver. Field testing will take place this fall.

Our experience and technology base will take us into **Information Board** supplies. We have already undertaken one project where both new boards and retrofit/service on existing boards have been delivered and done with a very good result. We will continuously keep you posted on this development and we hope, together with you to find market opportunities in this business area.

With quality products, customizing and good delivery we will continue serving you professionally.
