

**NEW**

**140 mm LCD Numerical Display**

The new 140mm display from Norsk Display AS gives you better readability, lower power and more options than before. One of the main options is the Power-over-Ethernet (PoE) converter card - greatly simplifying installation. In this mode the display will consume less than 5W - indoors or outdoors. And cooler operation means longer life. Longer life means lower overall cost.

Did we mention a better world?
